Loan Murabaha Split

Module technical name: `account_loan_murabaha_split`
Odoo version: 19.0 | **Depends on:** `account_loans`, `analytic`
Audience: Implementers / Functional consultants
Purpose: Document what this customization does and how to use it

1. What this module solves

Standard Odoo Enterprise Loans posts each installment as one journal entry that mixes **principal** and **interest/murabaha** on the short-term due account.

Anabtawi Islamic-loan practice often needs:

- Loan liability opened manually at **principal + murabaha** (full amount).
- Monthly due amount = **full installment (payment)**.
- Murabaha expense posted on a **separate entry** / separate liability account.
- Optional analytic distribution and a custom journal item label (البيان / Label).

This module extends `account.loan` Confirm behavior when the option is enabled. When the option is disabled, standard Odoo loan posting remains, with optional analytic + label enhancements.

2. Installation

1. Place the module folder `account_loan_murabaha_split` on the server addons path (e.g. Anabtawi-Group addons).
2. Restart Odoo.
3. Apps → Update Apps List.
4. Search **Loan Murabaha Split** → Install / Upgrade.

> **Note:** Requires Enterprise **Loans** (`account_loans`) and Analytic.

3. New fields on the loan

UI label	Arabic (if AR language)	Location	Technical	Description
Separate Murabaha Entry	قيد مرابحة منفصل	Loan Settings	`split_murabaha_interest`	Checkbox that switches custom posting on/off.
Murabaha Liability Account	حساب التزام المرابحة	Loan Settings (visible if checkbox ON)	`murabaha_liability_account_id`	Current liability account credited with monthly murabaha/interest. Required when checkbox is ON. Domain: Current Liabilities.
Analytic Account	الحساب التحليلي	Loan Settings	`analytic_account_id`	Optional. Applied as Analytic Distribution 100% on murabaha/expense lines (see rules below).
Label	البيان	Under Asset Group	`bayaan`	Optional text used as journal item Label together with each entry's accounting date.

Standard loan fields still required: Long Term Account, Short Term Account, Expense Account, Journal (General), amortization schedule (amount/interest/duration must match lines).

4. Recommended manual opening entry (not created by this module)

Implementers normally create the bank/loan opening entry manually once, for example:

Account	Debit	Credit
Bank	Amount Borrowed (principal)	
Murabaha (prepaid / related account per CoA policy)	Total Interest	

Loan (Long Term)		Principal + Interest (full)

Example: Bank 141,285.062 + Murabaha 9,540.538 = Loan credit 150,825.600. This module does **not** generate that opening entry.

5. What happens on Confirm

5.1 Checkbox OFF — standard Odoo + enhancements

Creates the normal loan moves. Payment entry (3 lines):

Account	Debit	Credit
Long Term	Principal	
Expense (murabaha expense)	Interest	
Short Term Due		Payment (principal + interest)

- **Analytic:** 100% on the Expense line only (if Analytic Account is set).
- **Label:** if Label is set → all 3 lines become `{Label} {entry date}`.
- Plus standard LT↔ST reclassification (principal of next 12 months) and its reversal.

5.2 Checkbox ON — Murabaha split mode

For each amortization line (except skipped dates), Confirm creates:

A) Principal & Interest entry — total = full payment

Account	Debit	Credit
Long Term	Payment (principal + interest)	
Short Term Due		Payment (principal + interest)

B) Murabaha entry (only if interest > 0)

Account	Debit	Credit
Expense	Interest	
Murabaha Liability (selected)		Interest

C) Reclassification LT → ST and **D) Reversal** next day

- Amount = sum of **payment** (principal + interest) for the next 12 schedule lines (not principal-only, unlike standard Odoo).
- Skipped on the last schedule line.
- **Analytic:** 100% on both Murabaha entry lines (Expense + Murabaha Liability).
- **Label:** if set → applied to both lines of (A) and both lines of (B), using each move's accounting date.

> **Numeric example (one month)**
> Principal 4,409.649 | Interest 303.651 | Payment 4,713.300
> Entry A total = 4,713.300 | Entry B total = 303.651
> Reclass amount = sum of next 12 payments

6. Posted vs Draft entries

On Confirm, all future schedule moves are created with `auto_post = at_date`. Only moves with **date ≤ today** are posted immediately. Later dates stay Draft until their date (then auto-post).

7. How implementers should use the module (checklist)

1. Create / import amortization schedule (Compute or upload).
2. Set standard accounts: Long Term, Short Term Due, Expense, Journal.
3. Set **Label** under Asset Group (optional).
4. Open **Loan Settings**:
    - Enable **Separate Murabaha Entry** for Islamic split posting.
    - Select **Murabaha Liability Account**.

    - Select **Analytic Account** if needed.
5. Post the **manual opening** bank/loan/murabaha entry outside the loan wizard (if required by finance).
6. Click **Confirm**.
7. Review **Posted Entries**: payment, murabaha, reclass, reversal.
8. When paying the bank installment manually, clear Due (and murabaha liability if still open per policy) against Bank for the full installment.

8. Changing an already confirmed loan

Generated moves are created at Confirm time. To regenerate with new options:

1. Cancel or Set to Draft (standard loan actions reverse/unlink generated moves).
2. Adjust checkbox / accounts / Label / Analytic.
3. Confirm again.

9. Important warnings for implementers

- If the opening entry already books total murabaha, review with Accounting whether monthly Murabaha expense posts would double-count interest. Account mapping must follow CoA policy.
- In split mode, Long Term is reduced by **full payment** each month (aligned with loan opened at P+I).
- Reclass in split mode also uses **payment**, not principal-only.
- Odoo loan Outstanding Balance is still driven by schedule principal logic; GL balances follow the journal entries.

10. Quick comparison

Topic	Checkbox OFF	Checkbox ON
Payment entry	3 lines (LT / Expense / Due)	2 lines (LT / Due) at full payment
Murabaha separate entry	No	Yes (Expense / Murabaha Liability)
Reclass amount	Next 12 principals (standard)	Next 12 payments (custom)
Analytic 100%	Expense line only	Both murabaha entry lines
Label (البيان)	3 payment lines	Payment (2) + Murabaha (2)

11. Support / location

Module path (Anabtawi):
